1. Product description

The Grundfos MAGNA1 circulator pumps are designed for circulating liquids in the following systems:

- heating systems
- air-conditioning and cooling systems

The pump range can also be used for the following systems:

- ground source heat pump systems
- solar-heating systems.

Duty range

Data	MAGNA1 (N) Single-head pumps	MAGNA1 D Twin-head pumps
Maximum flow rate, Q	71 m ³ /h	110 m ³ /h
Maximum head, H	18 metres	
Maximum system pressure	1.6 MPa (16 bar)	
Liquid temperature	-10 °C to +110 °C	

TM05 5862 4112 - TM05 5863 4112

Fig. 1 Single-head MAGNA1 pumps

Characteristic features

- Proportional-pressure control.
- Constant-pressure control.
- Constant-curve/constant-speed duty.
- No external motor protection required.
- Insulating shells supplied with single-head pumps for heating systems.
- Wide temperature range where the liquid temperature and the ambient temperature are independent of each other.

Benefits

- Simple installation.
- Low energy consumption. All MAGNA1 pumps comply with the EuP 2013 and 2015 requirements.
- Eight light fields for indication of pump setting.
- Low noise level.
- No maintenance and long life.
- The complete range is available for a maximum system pressure of 16 bar (PN 16).

Main applications

Heating systems

- Main pump
- mixing loops
- heating surfaces
- air-conditioning surfaces.

The MAGNA1 circulator pumps are designed for circulating liquids in heating systems with variable flows where it is desirable to optimise the setting of the pump duty point, thus reducing energy costs. To ensure correct operation, it is important that the sizing range of the system falls within the duty range of the pump.

Note: The product numbers of the various pump variants can be found on page 130.

Pump selection

Pump size

The selection of pump size should be based on the following:

- required maximum flow
- maximum pressure loss in the system.

Refer to the system characteristics to determine the duty point. See fig. 5.

TM02 2040 3301

Fig. 5 System characteristic

Operating conditions

It should be checked whether the operating conditions are fulfilled, i.e.

- liquid quality and temperature
- ambient conditions
- minimum inlet pressure
- maximum operating pressure.

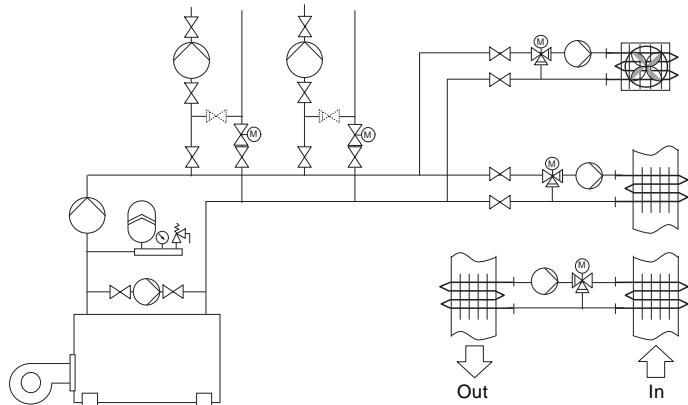

Control modes

- Proportional-pressure control in systems with considerable pressure losses in relation to large flow variations.
- Constant-pressure control in systems with insignificant pressure losses in relation to large flow variations.
- In constant-curve/constant-speed operation, the pump will run at a constant speed, independent of the actual flow demand in the system.

3. Functions

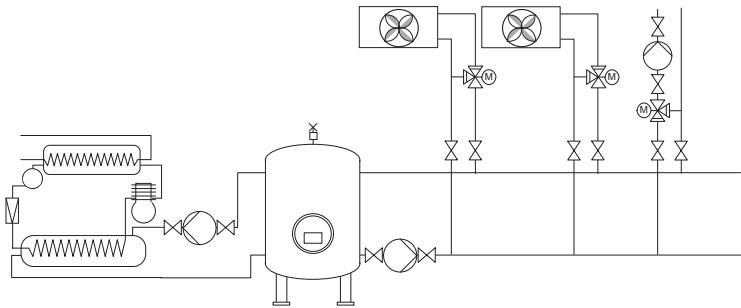

System applications

Heating systems

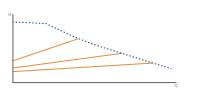

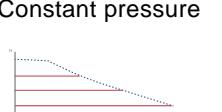

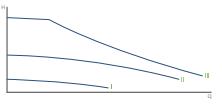

- One- and two-pipe heating systems
 - Main pumps
 - Zone pumps
 - Mixing loops
 - Boiler shunt pumps
 - Pumps for heating surfaces
 - Calorifiers
 - Underfloor-heating systems
 - Solar-heating systems
 - Ground source heat pump systems
 - Heat recovery systems.
- TM01 0168 0697

Air-conditioning and cooling systems

- Two-pipe air-conditioning systems
 - Main pumps
 - Zone pumps
 - Pumps for refrigeration units
 - Heat pump systems
 - Ground source heat pump systems
 - Heat recovery systems
 - Air-conditioning surfaces.
- TM01 0170 0697

Selection of control mode

System application	Select this control mode
In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.	
<ul style="list-style-type: none"> • Two-pipe heating systems with thermostatic valves and <ul style="list-style-type: none"> – very long distribution pipes – strongly throttled pipe balancing valves – differential-pressure regulators – large pressure losses in those parts of the system through which the total quantity of water flows (for example boiler, heat exchanger and distribution pipe up to the first branching). • Primary circuit pumps in systems with large pressure losses in the primary circuit. • Air-conditioning systems with <ul style="list-style-type: none"> – heat exchangers (fan coils) – cooling ceilings – cooling surfaces. 	Proportional pressure 
In systems with relatively small pressure losses in the distribution pipes.	
<ul style="list-style-type: none"> • Two-pipe heating systems with thermostatic valves and <ul style="list-style-type: none"> – dimensioned for natural circulation – small pressure losses in those parts of the system through which the total quantity of water flows (for example boiler, heat exchanger and distribution pipe up to the first branching) or – modified to a high differential temperature between flow pipe and return pipe (for example district heating). • Underfloor heating systems with thermostatic valves. • One-pipe heating systems with thermostatic valves or pipe balancing valves. • Primary circuit pumps in systems with small pressure losses in the primary circuit. 	Constant pressure 
The pump can also be set to operate according to the max. or min. curve, like an uncontrolled pump:	Constant curve 

Control modes

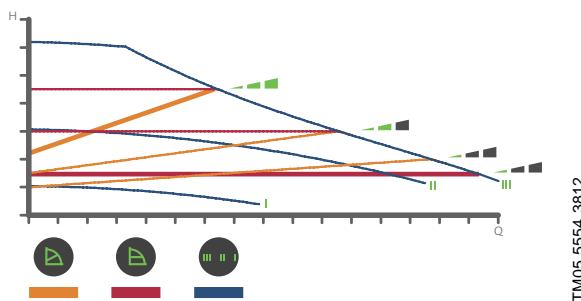

Fig. 6 Selection of pump setting for system type

Factory setting: Intermediate proportional-pressure curve, referred to as PP2.

Proportional-pressure curve (PP1, PP2 or PP3)

Proportional-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, PP1, PP2 or PP3. See fig. 7 where PP2 has been selected.

See [Selection of control mode](#), page 11, for further information.

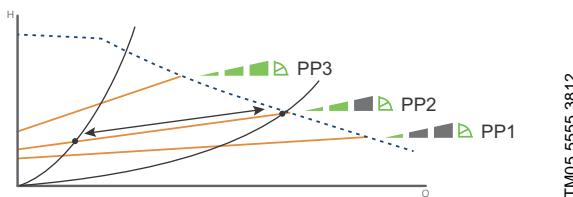

Fig. 7 Three proportional-pressure curves/settings

The selection of the right proportional-pressure setting depends on the characteristics of the heating system in question and the actual heat demand.

Constant-pressure curve (CP1, CP2 or CP3)

Constant-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, CP1, CP2 or CP3. See fig. 8 where CP1 has been selected.

See [Selection of control mode](#), page 11, for further information.

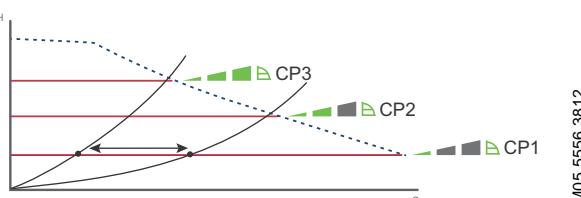

Fig. 8 Three constant-pressure curves/settings

The selection of the right constant-pressure setting depends on the characteristics of the heating system in question and the actual heat demand.

Constant curve/constant speed (I, II or III)

In constant-curve/constant-speed operation, the pump will run at a constant speed, independent of the actual flow demand in the system. The pump performance follows the selected performance curve, I, II or III.

See fig. 9 where II has been selected.

See [Selection of control mode](#), page 11, for further information.

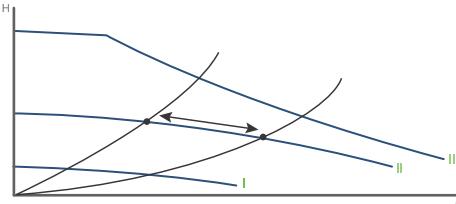

Fig. 9 Three constant curve/constant speed settings

The selection of the right constant-curve/constant-speed setting depends on the characteristics of the heating system in question.

Control panel

Fig. 10 Control panel at first start-up

The control panel on the pump comprises the following:

Pos.	Description
1	Grundfos Eye operating status. See section Grundfos Eye .
2	Eight light fields indicating the pump setting. See section Light fields indicating the pump setting .
3	Push-button for selection of pump setting.

Grundfos Eye

The Grundfos Eye is on when the power supply has been switched on. See fig. 10, pos. 1.

The Grundfos Eye is an indicator light providing information about the actual pump status.

The indicator light will flash in different sequences and provide information about the following:

- power on/off
- pump alarms.

Light fields indicating the pump setting

The pump has nine optional performance settings which can be selected with the push-button.

See fig. 10, pos. 3.

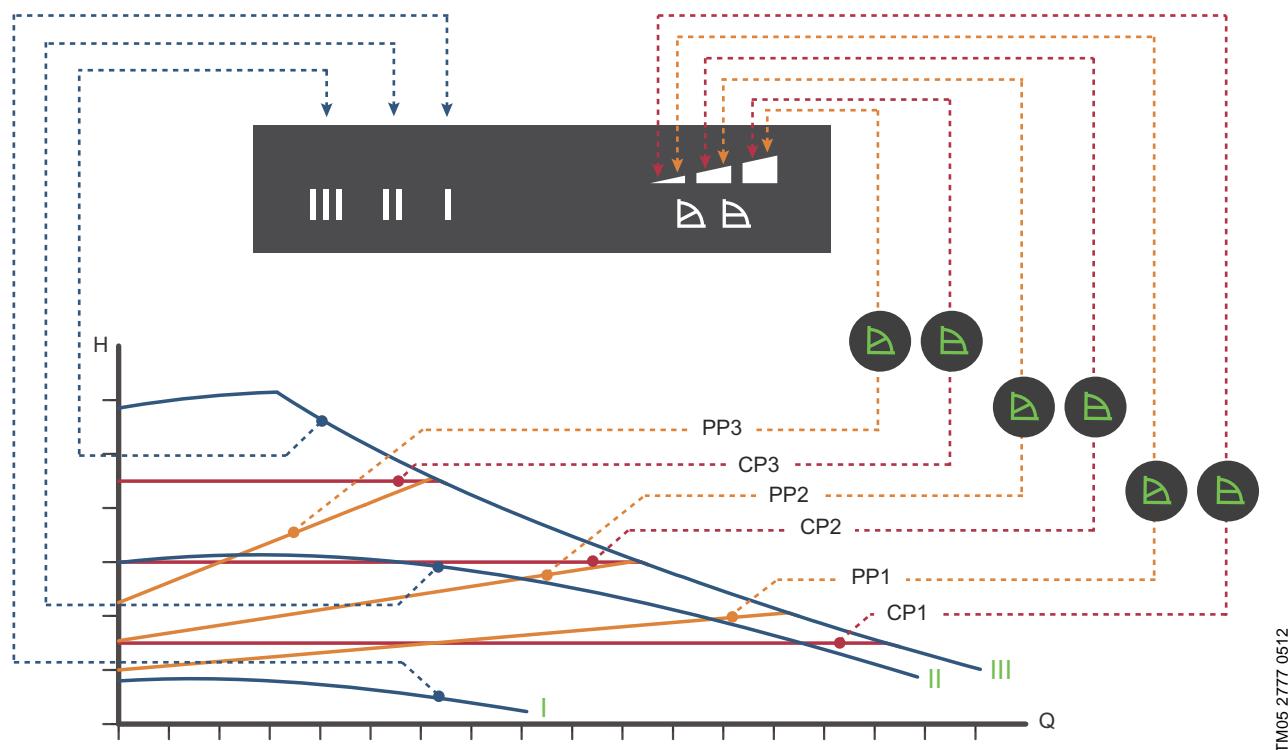

The pump setting is indicated by eight light fields in the display. See fig. 10, pos. 2.

Fig. 11 Factory setting, PP2

Button presses	Active light fields	Description
0		Intermediate proportional-pressure curve, referred to as PP2
1		Highest proportional-pressure curve, referred to as PP3
2		Lowest constant-pressure curve, referred to as CP1
3		Intermediate constant-pressure curve, referred to as CP2
4		Highest constant-pressure curve, referred to as CP3
5		Constant curve/constant speed III
6		Constant curve/constant speed II
7		Constant curve/constant speed I
8		Lowest proportional-pressure curve, referred to as PP1

Overview of settings

TM05 2777 0512

Fig. 12 Pump setting in relation to pump performance

Setting	Pump curve	Function
PP1	Lowest proportional-pressure curve	The duty point of the pump will move up or down on the lowest proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
PP2	Intermediate proportional-pressure curve	The duty point of the pump will move up or down on the intermediate proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
PP3	Highest proportional-pressure curve	The duty point of the pump will move up or down on the highest proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
CP1	Lowest constant-pressure curve	The duty point of the pump will move out or in on the lowest constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
CP2	Intermediate constant-pressure curve	The duty point of the pump will move out or in on the intermediate constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
CP3	Highest constant-pressure curve	The duty point of the pump will move out or in on the highest constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
III	Speed III	The pump runs on a constant curve which means that it runs at a constant speed. In speed III, the pump is set to run on the max. curve under all operating conditions. See fig. 12. Quick venting of the pump can be obtained by setting the pump to speed III for a short period.
II	Speed II	The pump runs on a constant curve which means that it runs at a constant speed. In speed II, the pump is set to run on the intermediate curve under all operating conditions. See fig. 12.
I	Speed I	The pump runs on a constant curve which means that it runs at a constant speed. In speed I, the pump is set to run on the min. curve under all operating conditions. See fig. 12.

4. Operating conditions

General recommendations

Water in heating systems	Water quality according to local standards such as the German standard VDI 2035
Water containing glycol	Maximum viscosity = 15 mm ² /s (~ 50 % glycol at +2 °C)

Liquid temperature

-10 to +110 °C.

Ambient conditions

Ambient temperature during operation	0 to +40 °C
Ambient temperature during storage and transport	-30 to +55 °C
Relative air humidity	Max. 95 %

Maximum operating pressure

PN 6: 6 bar / 0.6 MPa

PN 10: 10 bar / 1.0 MPa

PN 16: 16 bar / 1.6 MPa.

Minimum inlet pressure

The following relative minimum inlet pressure must be available at the pump inlet during operation to avoid cavitation noise and damage to the pump bearings.

Note: The values in the table below apply to single-head pumps and twin-head pumps in single-head operation.

Single-head pumps DN	Liquid temperature		
	75 °C	95 °C	110 °C
	Inlet pressure [bar] / [MPa]		
25-40/60/80/100/120	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-40/60/80/100	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-120	0.90 / 0.09	1.30 / 0.13	1.9 / 0.19
40-40/60	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
40-80/100	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
40-120/150/180	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-40/60/80	0.10 / 0.01	0.40 / 0.04	1.0 / 0.10
50-100	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-120	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-150/180	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
65-40/60/80/100	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
65-120	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
65-150	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
80-40/60/80/100/120	0.50 / 0.05	1.00 / 0.10	1.5 / 0.15
100-40/60/80/100/120	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17

In the case of twin-head operation, the required relative inlet pressure must be increased by 0.1 bar / 0.01 MPa compared to the stated values for single-head pumps or twin-head pumps in single-head operation.

Note: The actual inlet pressure plus pump pressure against a closed valve must be lower than the maximum permissible system pressure.

The relative minimum inlet pressures apply to pumps installed up to 300 metres above sea level. For altitudes above 300 metres, the required relative inlet pressure must be increased by 0.01 bar / 0.001 MPa per 100 metres altitude. The MAGNA1 pump is only approved for an altitude of 2000 metres above sea level.

Pumped liquids

The pump is suitable for thin, clean, non-aggressive and non-explosive liquids, not containing solid particles or fibres that may attack the pump mechanically or chemically.

In heating systems, the water should meet the requirements of accepted standards on water quality in heating systems, for example the German standard VDI 2035.

Do not use the pump for flammable liquids, such as diesel oil and petrol.

Do not use the pump for aggressive liquids, such as acids and seawater.

If the pump is not used during periods of frost, necessary steps must be taken to prevent frost bursts.

Additives with a density and/or kinematic viscosity higher than those/that of water will reduce the hydraulic performance.

Do not use additives that in any way can/will disturb the functionality of the pump.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are lime content, pH value, temperature, content of solvents and oils.

The pump can be used for pumping water/glycol mixtures up to 50 %. See section [General recommendations](#).

The pumping of glycol mixtures will reduce the hydraulic performance.

Electrical data

Pump type	MAGNA1 (D)
Enclosure class	IPX4D (EN 60529).
Insulation class	F.
Supply voltage	1 x 230 V ± 10 % 50/60 Hz, PE.
Leakage current	$I_{leakage} < 3.5 \text{ mA}$. The leakage current is measured in accordance with EN 60335-1.
EMC	EN 55014-1:2006, EN 55014-2:1998, EN 61800-3-3:2008 and EN 61000-3-2:2006.

Sound pressure level

Pump type	MAGNA1 (D)
Sound pressure level	$\leq 43 \text{ dB(A)}$

5. Construction

The MAGNA1 is of the canned-rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

The pump is characterised by the following:

- controller integrated in the control box
- control panel on the control box
- twin-head versions
- no external motor protection required
- insulating shells supplied with single-head pumps for heating systems.

Motor and electronic controller

The MAGNA1 incorporates a 4-pole synchronous, permanent-magnet motor (PM motor). This motor type is characterised by higher efficiency than a conventional asynchronous squirrel-cage motor.

The pump speed is controlled by an integrated frequency converter.

Pump connections

Threaded pipe connections according to ISO 228-1.

Flange dimensions according to EN 1092-2.

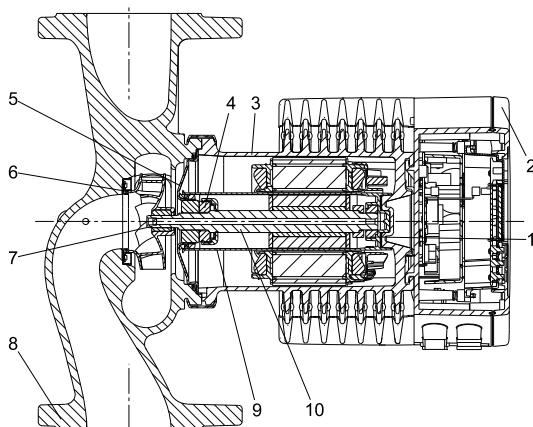

Surface treatment

The pump housing and pump head are electrocoated to improve the corrosion resistance.

Electrocoating includes:

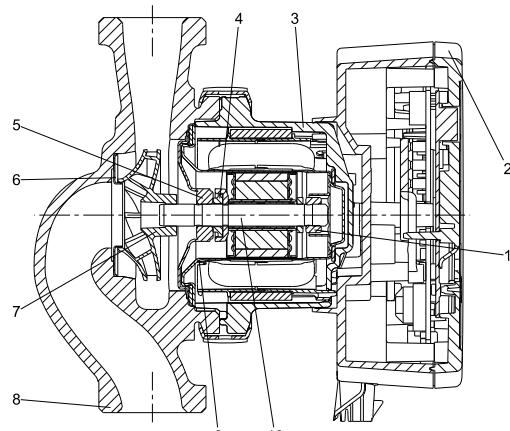

- alkaline cleaning
- pretreatment with zinc phosphate coating
- cathodic electrocoating (epoxy)
- curing of paint film at 200 to 250 °C.

Sectional drawings

Rotor can materials

MAGNA1 25-40/60/80/100 (PN 6/10) and MAGNA1 32-40/60/80 (PN 6/10) have stainless-steel rotor can.

All other versions have PPS-composite rotor can. See below table.

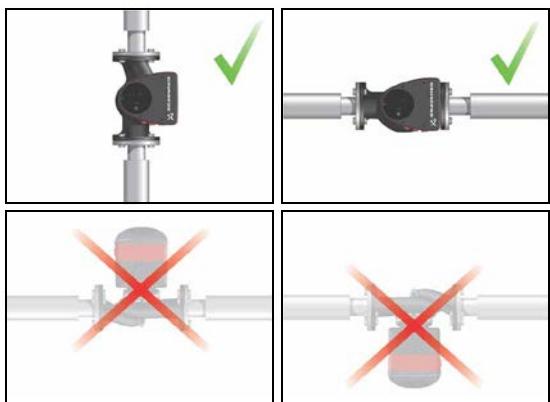

Pump type	Maximum system pressure		
	PN 6 / 0.6 MPa	PN 10 / 1.0 MPa	PN 16 / 1.6 MPa
MAGNA1 25-40/60/80/100	Stainless-steel rotor can		
MAGNA1 25-120	PPS-composite rotor can		
MAGNA1 32-40/60/80	Stainless-steel rotor can		
MAGNA1 32-100/120			
MAGNA1 40-40/60/80/100/120/150/180			PPS-composite rotor can
MAGNA1 50-40/60/80/100/120/150/180		PPS-composite rotor can	
MAGNA1 65-40/60/80/100/120/150			
MAGNA1 80-40/60/80/100/120			
MAGNA1 100-40/60/80/100/120			

6. Installation

Mechanical installation

The MAGNA1 is designed for indoor installation. The pump must be installed with horizontal motor shaft.

The pump may be installed in horizontal as well as vertical pipes.

TM05 5518 3812

Fig. 15 Installation positions

Arrows on the pump housing indicate the liquid flow direction through the pump.

The control box must be in horizontal position with the Grundfos logo in vertical position. See fig. 15.

This is described in the installation and operating instructions.

The pump must be installed in such a way that it is not stressed by the pipework.

The pump may be suspended direct in the pipes, provided that the pipework can support the pump.

Twin-head pumps are prepared for installation on a mounting bracket or base plate.

To ensure adequate cooling of motor and electronics, the following must be observed:

- Position the pump in such a way that sufficient cooling is ensured.
- The ambient temperature must not exceed +40 °C.

Insulating shells

The insulating shells supplied with single-head MAGNA1 pumps are for heating systems and should be fitted as part of the installation.

Insulating shells for pumps for air-conditioning and cooling systems are available as an accessory. See section [Insulating kits for air-conditioning and cooling systems](#), page 21.

Note: Insulating shells are not available for twin-head pumps.

Electrical installation

The electrical connection and protection should be carried out in accordance with local regulations.

- The pump must be connected to an external mains switch.
- The pump must always be correctly earthed.
- The pump requires no external motor protection.
- The pump incorporates thermal protection against slow overloading and blocking.
- When switched on via the power supply, the pump will start pumping after approx. 5 seconds.

Note: The number of starts and stops via the power supply must not exceed four times per hour.

The pump mains connection must be made as shown in fig. 16 or 17, page 20.

Cables

- All cables used must be connected in accordance with local regulations.

Additional protection

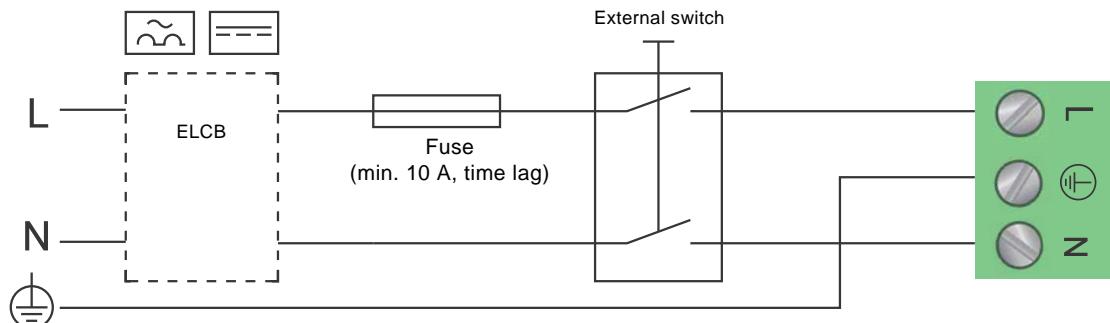

If the pump is connected to an electric installation where an earth leakage circuit breaker (ELCB) is used as an additional protection, this circuit breaker must trip when earth fault currents with DC content (pulsating DC) occur.

The earth leakage circuit breaker must be marked with the first or both of the symbols shown below:

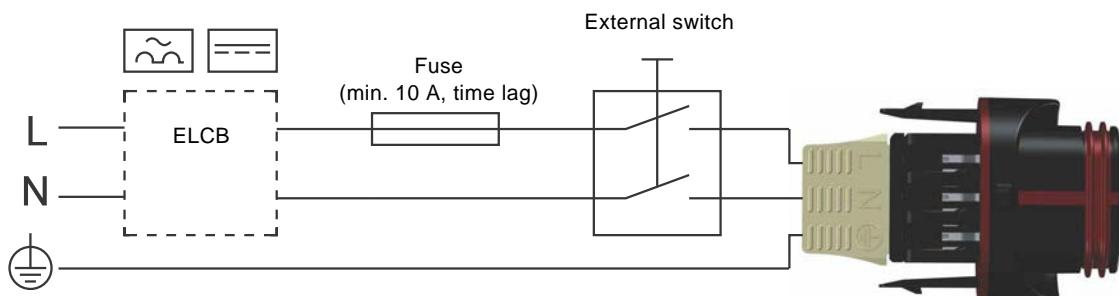

Symbol	Description
	High-sensitivity ELCB, type A, according to IEC 60775
	High-sensitivity ELCB, type B, according to IEC 60775

7. Accessories

Insulating kits for air-conditioning and cooling systems

Single-head pumps for air-conditioning and cooling systems can be fitted with insulating shells. A kit consists of two shells made of polyurethane (PUR) and a self-adhesive seal to ensure tight assembly.

Blanking flanges

A blanking flange is used to blank off the opening when one of the pumps of a twin-head pump is removed for service to enable uninterrupted operation of the other pump.

8. Guide to performance curves

Each pump setting has its own performance curve (Q/H curve). A power curve (P1 curve) belongs to each Q/H curve. The power curve shows the pump power consumption (P1) in Watt at a given Q/H curve.

The P1 value corresponds to the value that can be read from the pump display. See fig. 20.

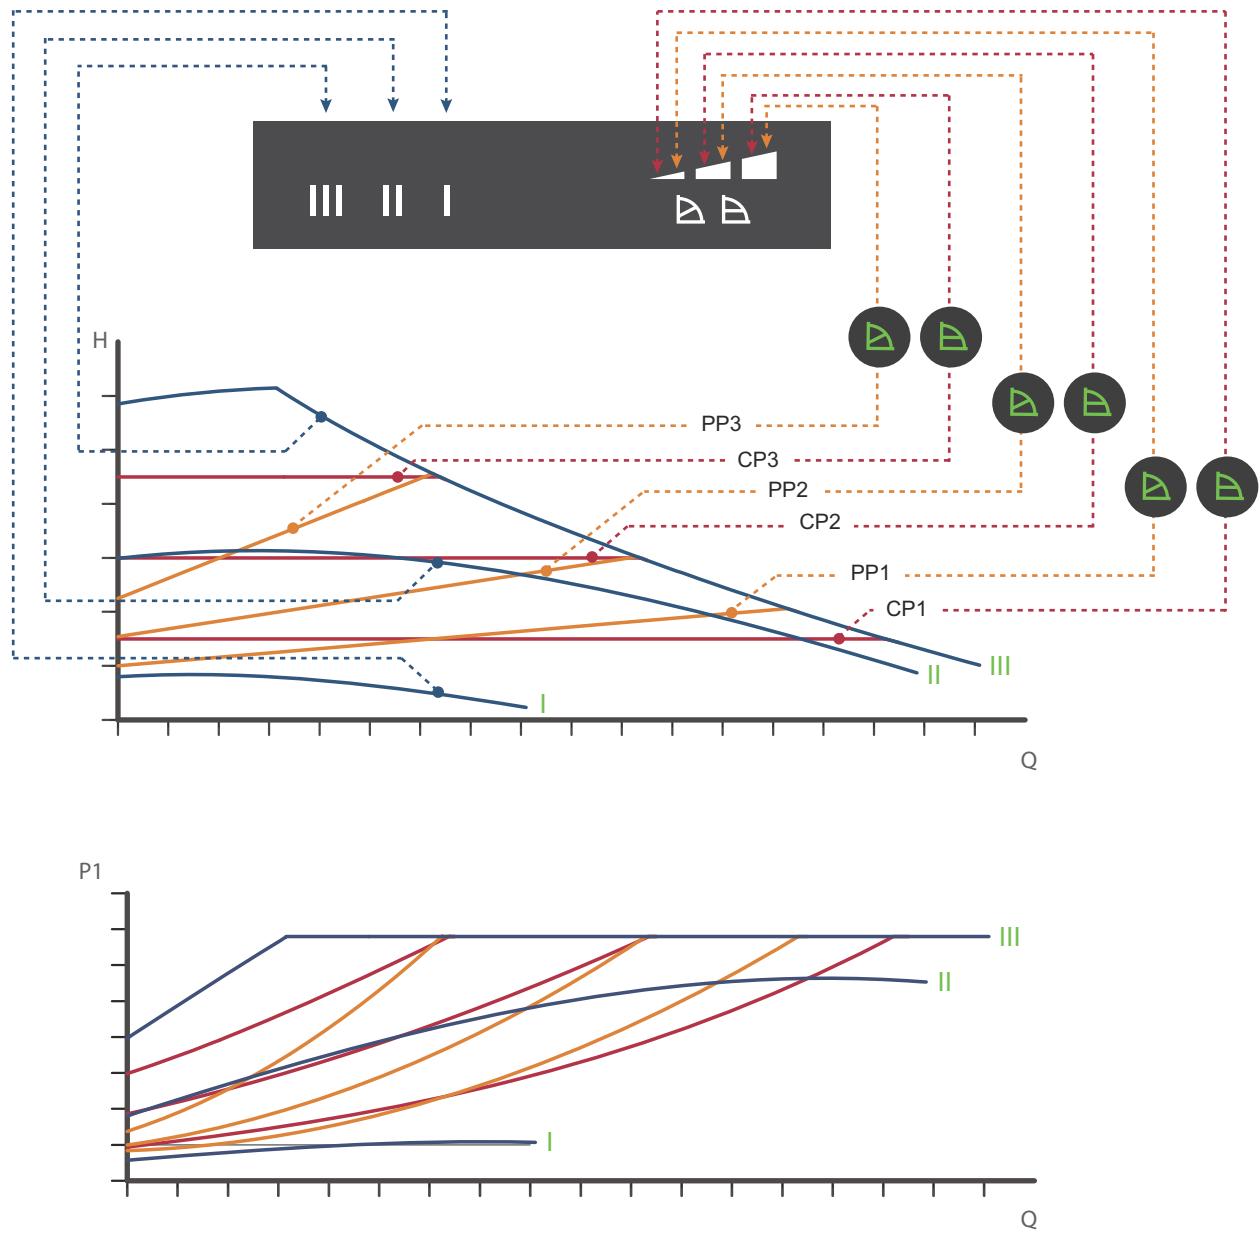

Fig. 20 Performance curves in relation to pump setting

TM05 2778 4112

Setting	Pump curve
PP1	Lowest proportional-pressure curve
PP2	Intermediate proportional-pressure curve
PP3	Highest proportional-pressure curve
CP1	Lowest constant-pressure curve
CP2	Intermediate constant-pressure curve
CP3	Highest constant-pressure curve
III	Constant-curves duty, fixed speed III
II	Constant-curves duty, fixed speed II
I	Constant-curves duty, fixed speed I

9. Curve conditions

Performance curves

The guidelines below apply to the performance curves on pages 48 to 105:

- Test liquid: airless water.
- The curves apply to a density of $\rho = 998.2 \text{ kg/m}^3$ and a liquid temperature of $+20^\circ\text{C}$.
- All curves show average values and should not be used as guarantee curves. If a specific minimum performance is required, individual measurements must be made.
- The curves apply to a kinematic viscosity of $\nu = 1.004 \text{ mm}^2/\text{s}$ (1.004 cSt).
- Reference supply voltage: 1 x 230 V, 50 Hz.
- Curves obtained according to EN 16297.

Symbols used on the following pages

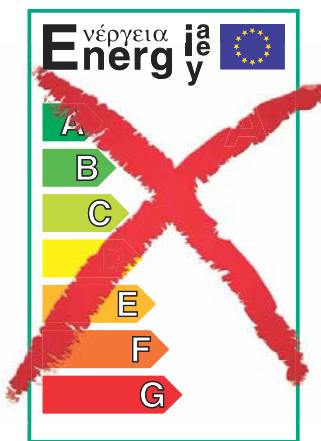

TM05 2682 0412

Fig. 21 Energy efficiency index (EEI)

The MAGNA1 is energy-optimised and complies with the EuP Directive (Commission Regulation (EC) No 641/2009) which will be effective as from 1 January 2013.

For MAGNA1 pumps, the energy efficiency index (EEI) is ≤ 0.23 .

TM05 3936 1712

Fig. 22 Old energy label

From 1 January 2013, the old A to G energy label will be replaced by the new energy efficiency index (EEI).

Only the best of today's A-labelled circulator pumps will meet the new requirements.

Figure 23 shows the energy consumption index for a typical circulator pump compared to the various EEI limits.

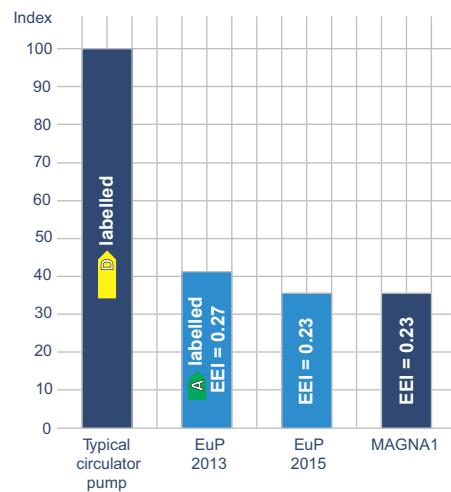

Fig. 23 Energy consumption index

With an energy efficiency index (EEI) equal to the EuP 2015, you can achieve significant energy savings compared to a typical circulator pump and thus a remarkably fast return on investment. This means, of course, that the MAGNA1 meets the standards of the EuP legislation.

For more information about the new energy directive, please visit:

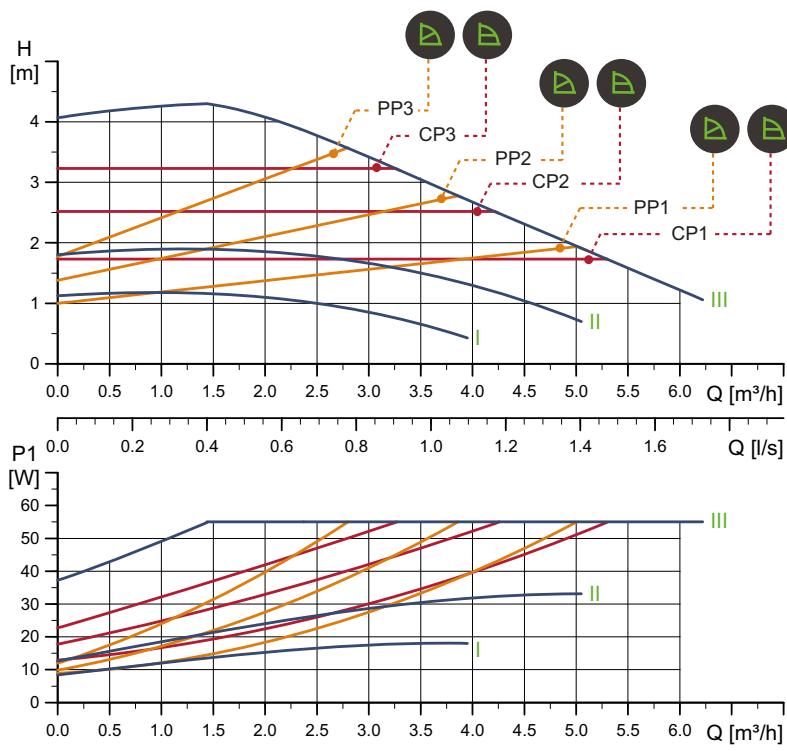

TM05 2683 0412

12. Further product documentation

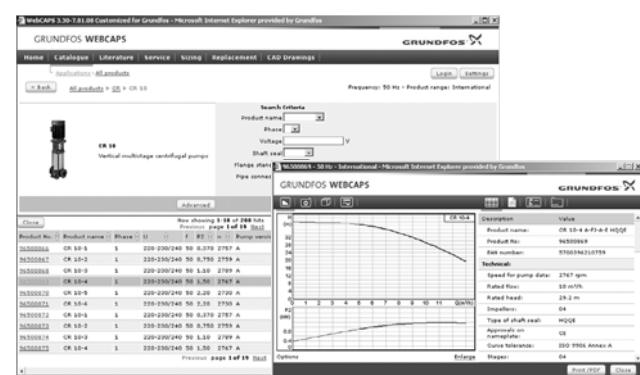

WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program. WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

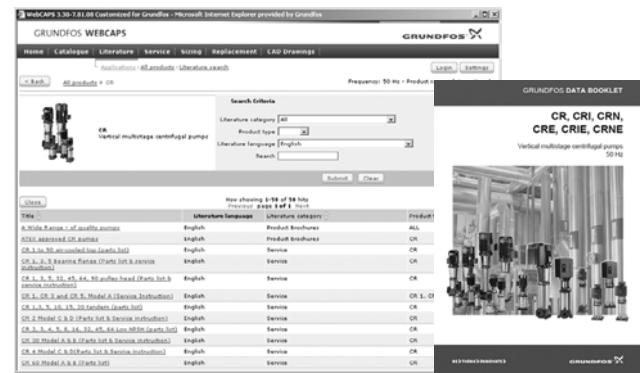

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalogue

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps. Furthermore, the section contains service videos showing you how to replace service parts.

WinCAPS

Fig. 24 WinCAPS DVD

Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation.
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool.
- Determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on DVD and updated once a year.
